

Fertility ~~being considered~~ as one of the main parts of population growth has ~~been~~ always ~~been~~ ~~an~~ ~~considered~~ issue that extensive and continual research has been done on the factors affecting it in Iran and abroad. Measurement and recognition of the level of fertility in each class seems to be the essential component of population projections and the infrastructure of economic, social, and demographic planning for the development of a country. ~~It is~~ ~~also~~ ~~they~~ ~~are~~ considered as important and major indicators in assessing the economic and social conditions of the studied society (1). ~~Fertility as one of the major population flows plays a decisive role in the economic and social development of communities at micro and macro levels.~~ Fertility sociology ~~has a~~ ~~is of~~ great importance in discussing ~~on~~ population transition. Experience has also shown that fertility changes play a greater role in determining the size of the population than changes in mortality (2). Fertility and infertility problems are among the complex issues in medicine. In any community, approximately 13% of people are infertile. The most common cause of ~~male~~ infertility ~~in males~~ is their inability to produce enough healthy and active sperms (3). Infertility ~~can be cause~~ ~~is one of~~ personal and social problems ~~because~~ ~~of~~ ~~with~~ spending high costs for treatment and can damage the family stability. Infertility ~~which is the~~ ~~or~~ inability to have children affects men and women in reproductive age, and ~~can~~ expose ~~the~~ people with problem ~~to much of family pressures~~. The World Health Organization has introduced infertility as an important problem of reproduction. However, infertility can cause major emotional disorders, psychological, and social consequences and side effects. ~~The problem intervenes with couples' identity in such a way that they question their merit, competence and ability.~~ (4).
